

How Reality Capture & Drones Can Improve Project Performance

The digital transformation of construction on-site execution

Presented by

Gil Mildworth

VP Business Development
SiteAware

With 25 years in executive business roles, marketing and strategic planning in highly complex technological environments, Gil Mildworth is passionate about business value creation by innovation. Mildworth is a Talpott graduate, and holds a master's degree in electrical engineering and a bachelor's degree in physics and mathematics.

"Full-scale digitalization in nonresidential construction would, within 10 years, be capable of producing annual global cost savings of \$0.7-1.2 trillion (13-21%) on Engineering and Construction"

* The Boston Consulting Group - Digital in Engineering and Construction

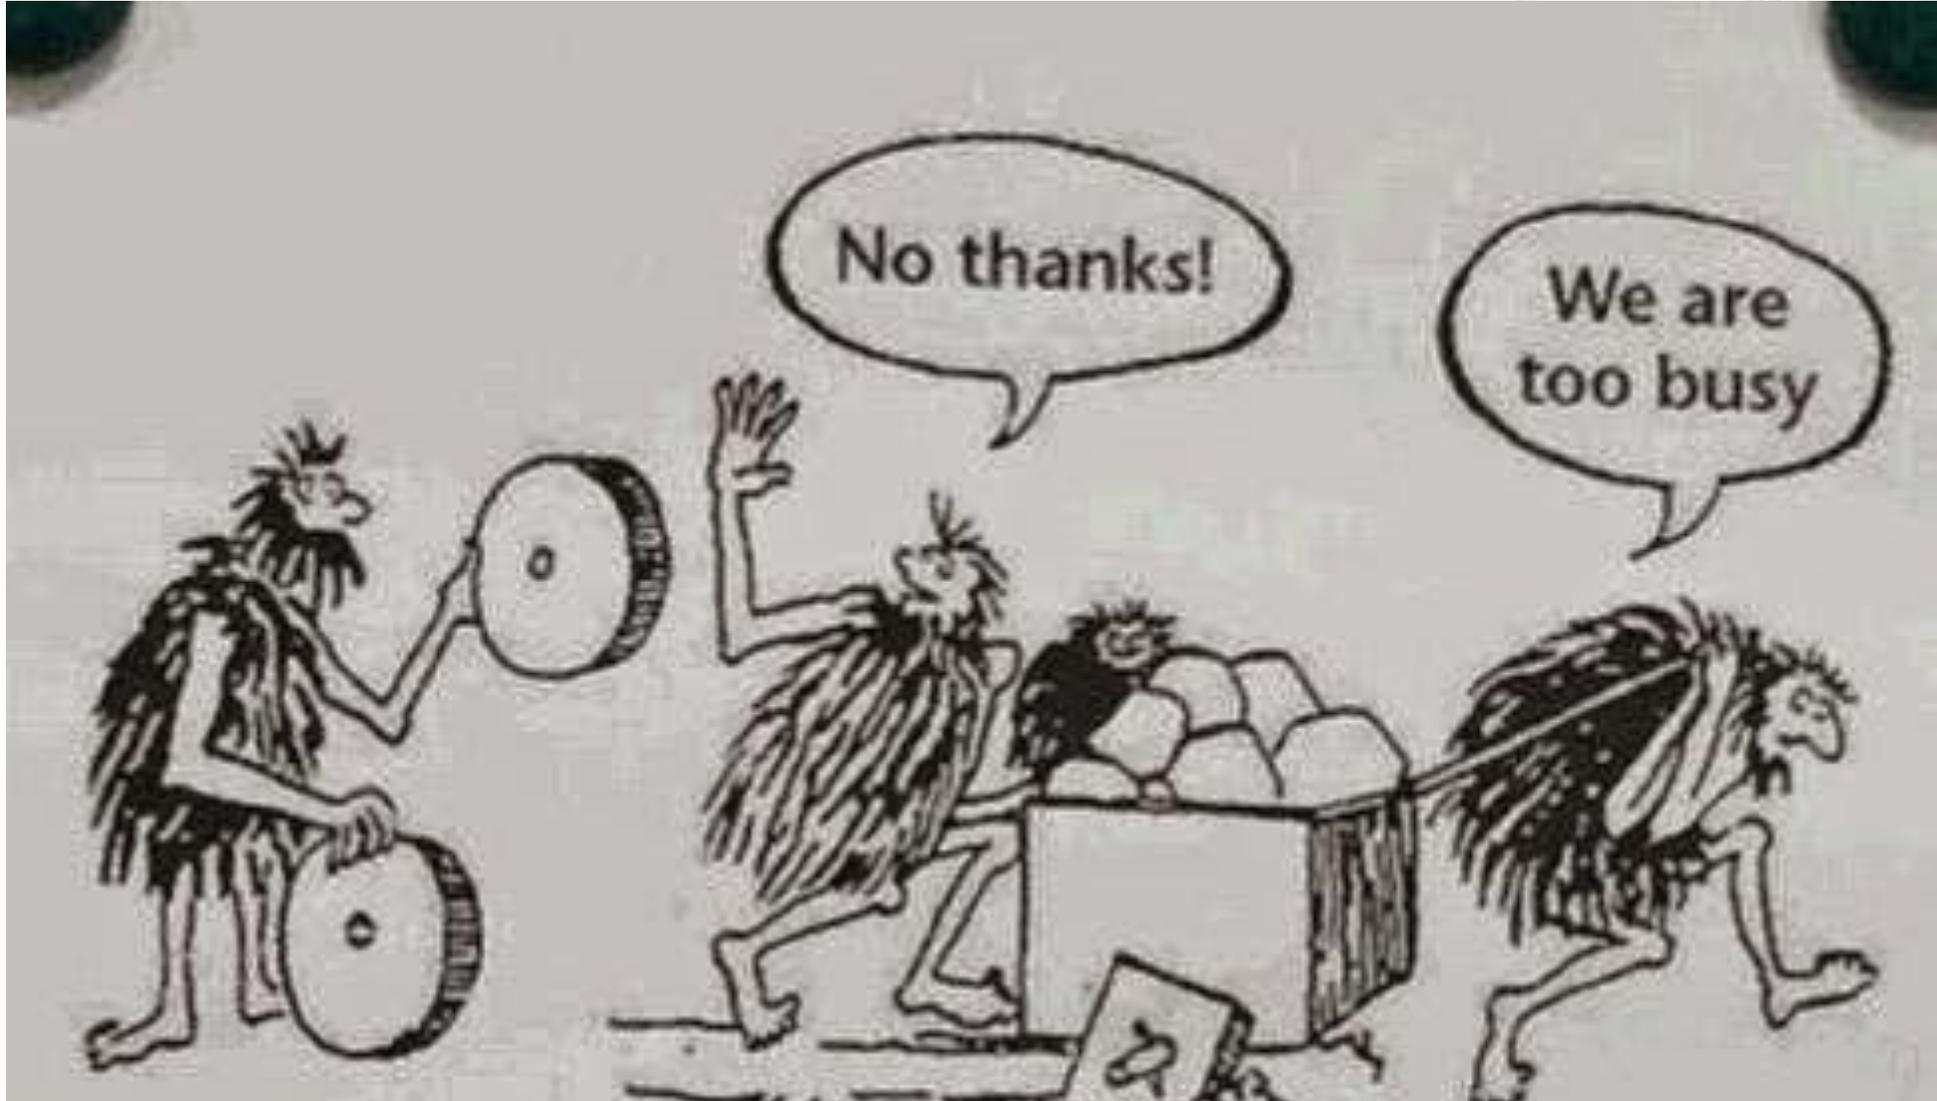

Digital transformation can reduce overall projects costs by 45%

* McKinsey and Co.

"Experience in other industries shows that companies that have been quick to embrace emerging technologies and develop new platforms – the first movers – have gained a strong competitive advantage."

* Steffen Fuchs, McKinsey and Co.

The Technology Adoption Challenge in Our Industry

SiteAware at a Glance

Digital Replica solutions for the construction industry improving the efficiency and quality of the on-site execution

U.S. operation in Denver, Colorado,
HQ and R&D in Israel

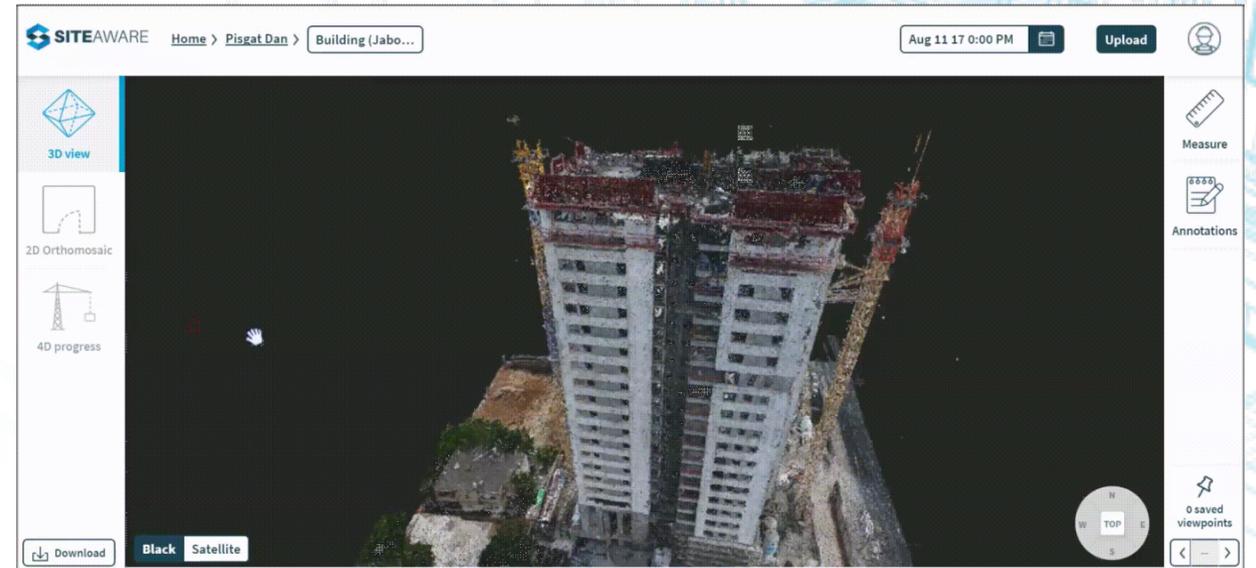

SaaS product, launched Q2/2017

Strong IP in 3-D data analysis,
sensors and autonomous vehicles

Serving top ENR customers in the U.S.

SiteAware: Transforming Outdoor Jobsite Activities

1. Improving efficiency of project management
2. Capturing and addressing quality issues

Reduction of unnecessary costs

Lowering delays – e.g., improving timing of activities

Reducing reworks – e.g., early detection of errors

Minimizing disputes – e.g., accurate documentation

Contingency efficiency – e.g., detailed site view

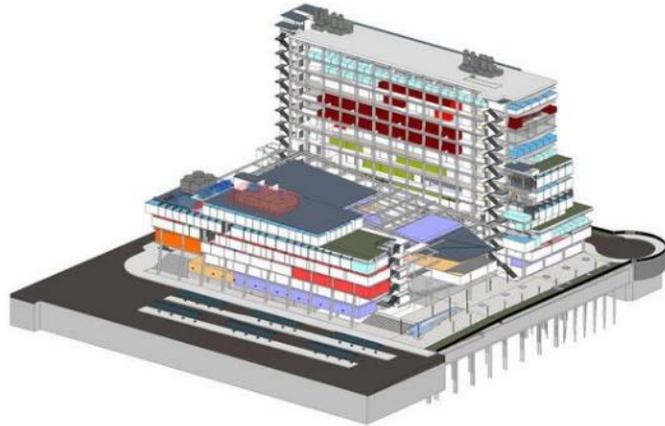

The Construction Opportunity

Digital transformation can reduce overall projects costs by 45%

Autonomous Drone Operation for Vertical Structures

- Proprietary “automatic pilot”
- Transforming off-the-shelf drones to autonomous camera robots
- Flying around and close to vertical structure
- Supports inspection and modelling of high structures

Autonomous drone scan – Low & close to structure

SiteAware <> Procore Integration

Identifying Issues in SiteAware Viewer

Seamless Integration into Procore (Punch Items)

The screenshot displays the Procore mobile application interface. At the top, a dark navigation bar includes the Procore logo, project name 'JOSH BUILDING CORP. Dronomy Test Project', a 'TOOLBOX Home' icon, a 'FAVORITES' star icon, and notification icons for a home indicator, help, and a '3+' badge next to a profile icon labeled 'SD'. Below the navigation bar, the main content area is titled 'PROJECT HOME'. It features a 'PROJECT TEAM' section with a table that is currently empty, displaying 'No team members'. Below this is a 'PROJECT OVERVIEW' section with a progress bar. The progress bar shows '1' item in the '> 7 Days' category (green) and '1' total open item. The 'MY OPEN ITEMS' section at the bottom is also empty, displaying 'No Open Items'. A 'PROJECT WEATHER' sidebar is visible on the right side of the screen, and a 'Minimize Sidebar' button is located at the bottom right of the sidebar.

PROJECT HOME

Customer Case Studies

Case Study – PayApp Verification

- **Scope**

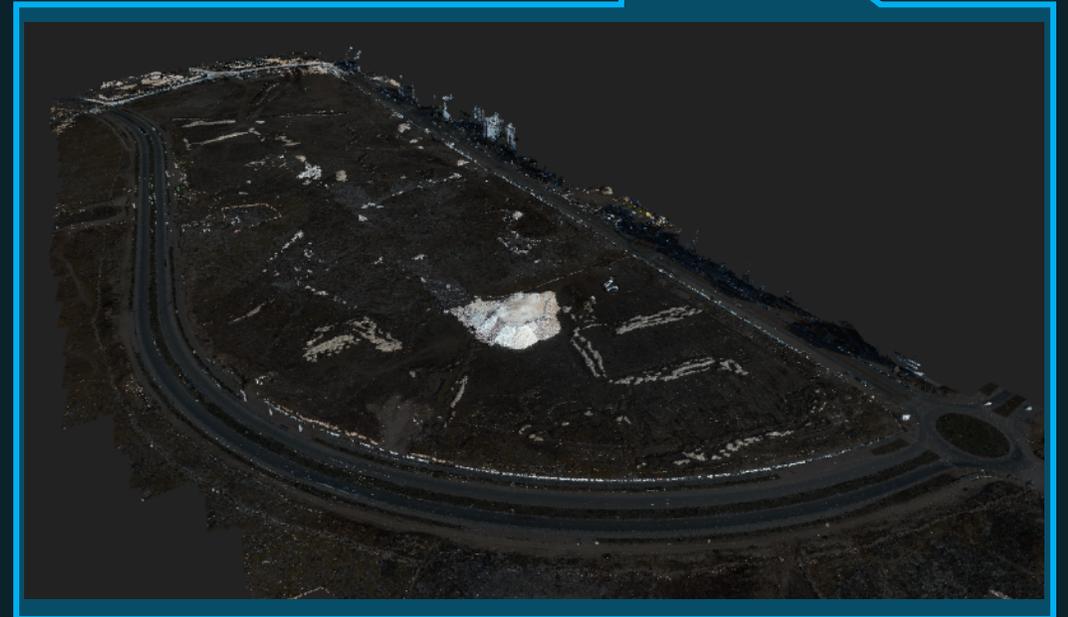

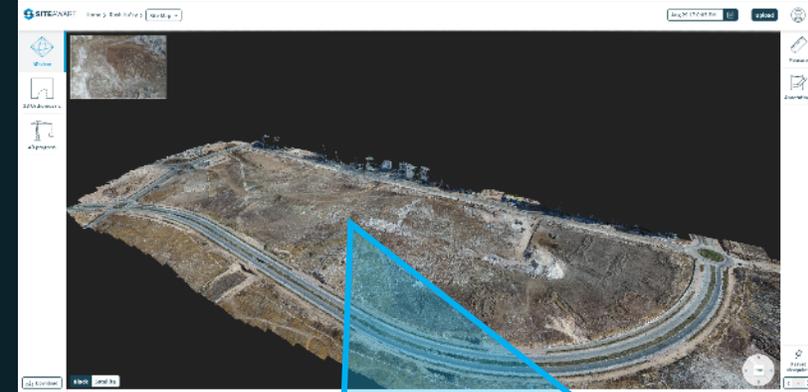

- New residential subdivision
- Earthworks and infrastructure

- **Case Summary**

- During a monthly pay application review, the owner's representative identified a discrepancy in one of the milestones submitted for payment
- Change detection was used to verify no changes were made during the relevant period
- The owner ended up not approving the payment for milestone completion

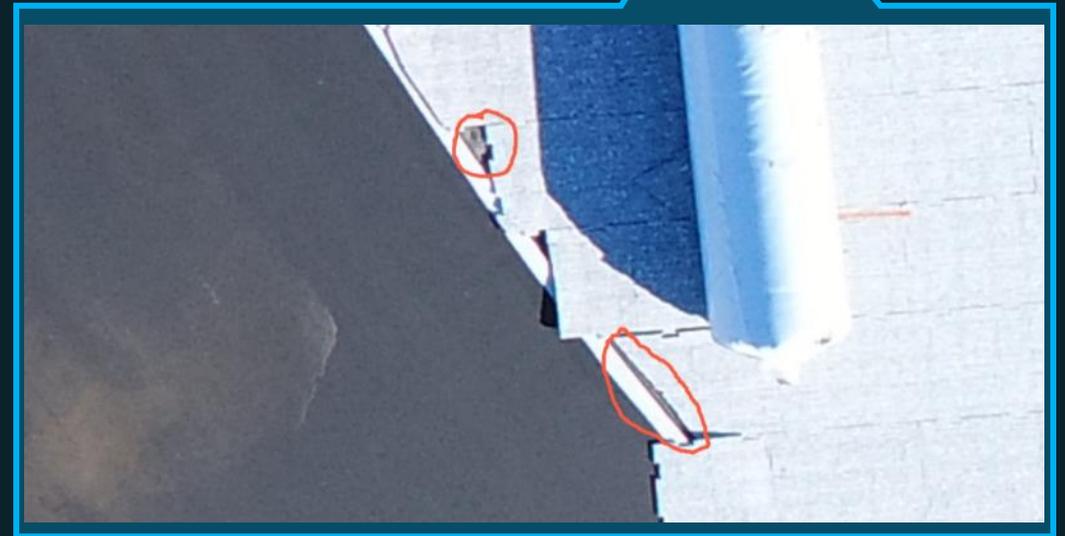

- **Savings**

- An advanced payment of \$280,000 postponed

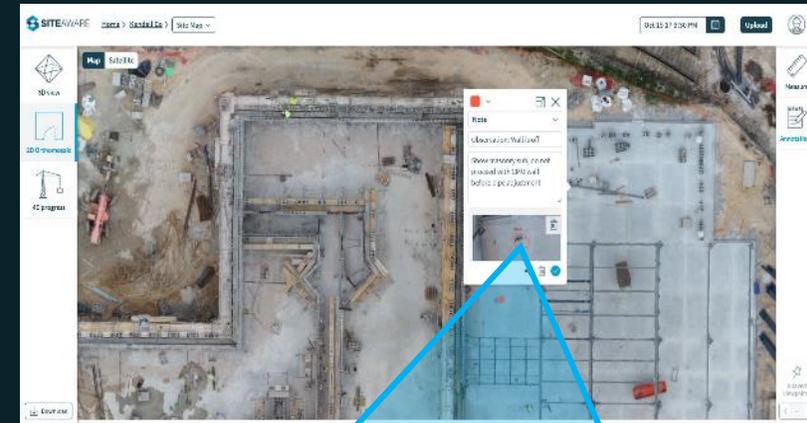

Case Study – Installation Documentation

- **Scope**
 - New high school athletic complex
 - New artificial turf and track, as well as spectator facilities
- **Case Summary**
 - After completion of artificial turf, the project team spotted that edges were beginning to sink
 - By accessing previous scans, the team found that the turf installer placed the sublayer in an incorrect method
 - The project team ordered the subcontractor to remove the turf in selected locations and to reinstall the sublayer
- **Savings**
 - Rework was performed in targeted areas rather than inclusively
 - Potential claims from the owner upon completion

Case Study – Prevention of Rework

- **Scope**
 - New municipal facility
 - Combination of Steel and Masonry Construction
- **Case Summary**
 - A standard review of raw images by the site engineer found an error in the outline of a masonry wall to be built
 - A snapshot was taken and marked up and saved as a field observation
 - The masonry subcontractor was notified of the error and was told to hold construction until outline was verified
- **Savings**
 - 2 days labor of a masonry crew (removal of the flawed wall, repositioning in the correct location)

Case Study – Weekly Trade Meetings

- **Scope**

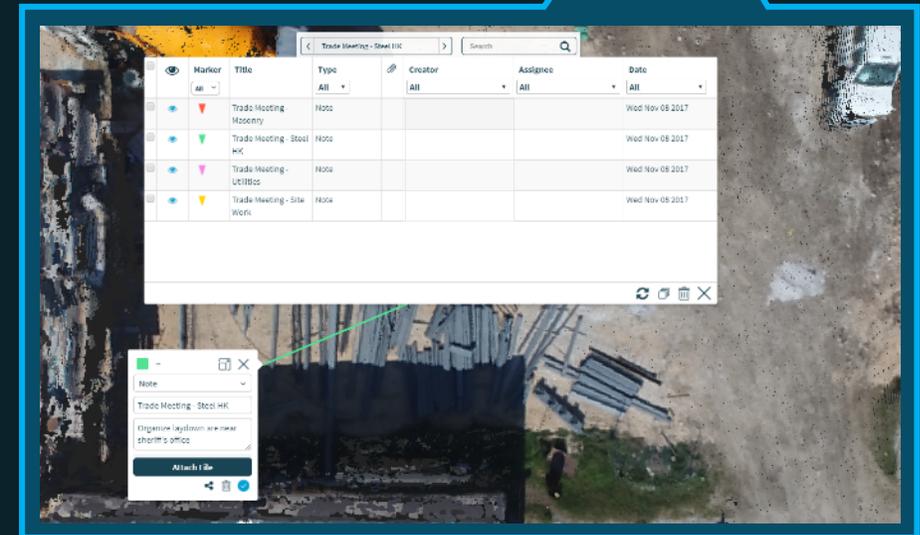

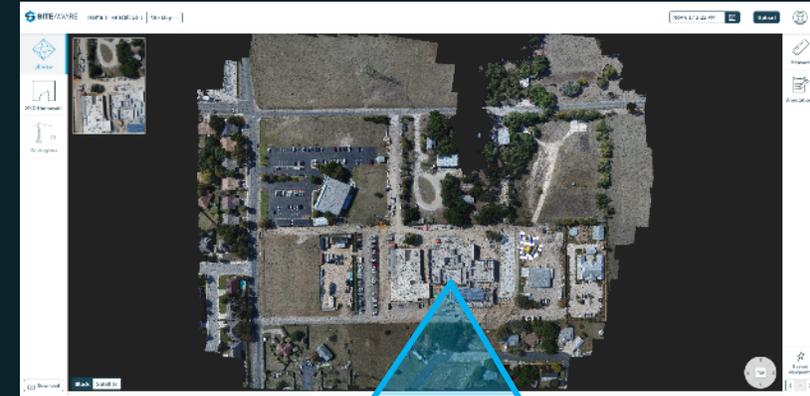

- New institutional facility
- Site work, structural work and underground utilities

- **Case Summary**

- The superintendent uses visual aids from the solution to clearly communicate issues to the different subcontractors
- The meetings agenda is translated to annotations on a 2-D/3-D model

- **Savings**

- Superintendent's time and effort explaining tasks in the field
- Weekly meetings have become shorter
- Clear communication reduces errors and idle time waiting for detailed instructions

Marker	Title	Type	Creator	Assignee	Date
All	Trade Meeting - Masonry	Note	All	All	Wed Nov 08 2017
All	Trade Meeting - Steel	Note	All	All	Wed Nov 08 2017
All	Trade Meeting - UTILS	Note	All	All	Wed Nov 08 2017
All	Trade Meeting - Site Work	Note	All	All	Wed Nov 08 2017

Note: Trade Meeting - Steel HK
Organize layout on-site near storm's office

Attach File

Case Study – QA/QC of Cladding

- **Scope**

- New residential high-rise
- Exterior insulation and finish system (EIFS) on concrete structure

- **Case Summary**

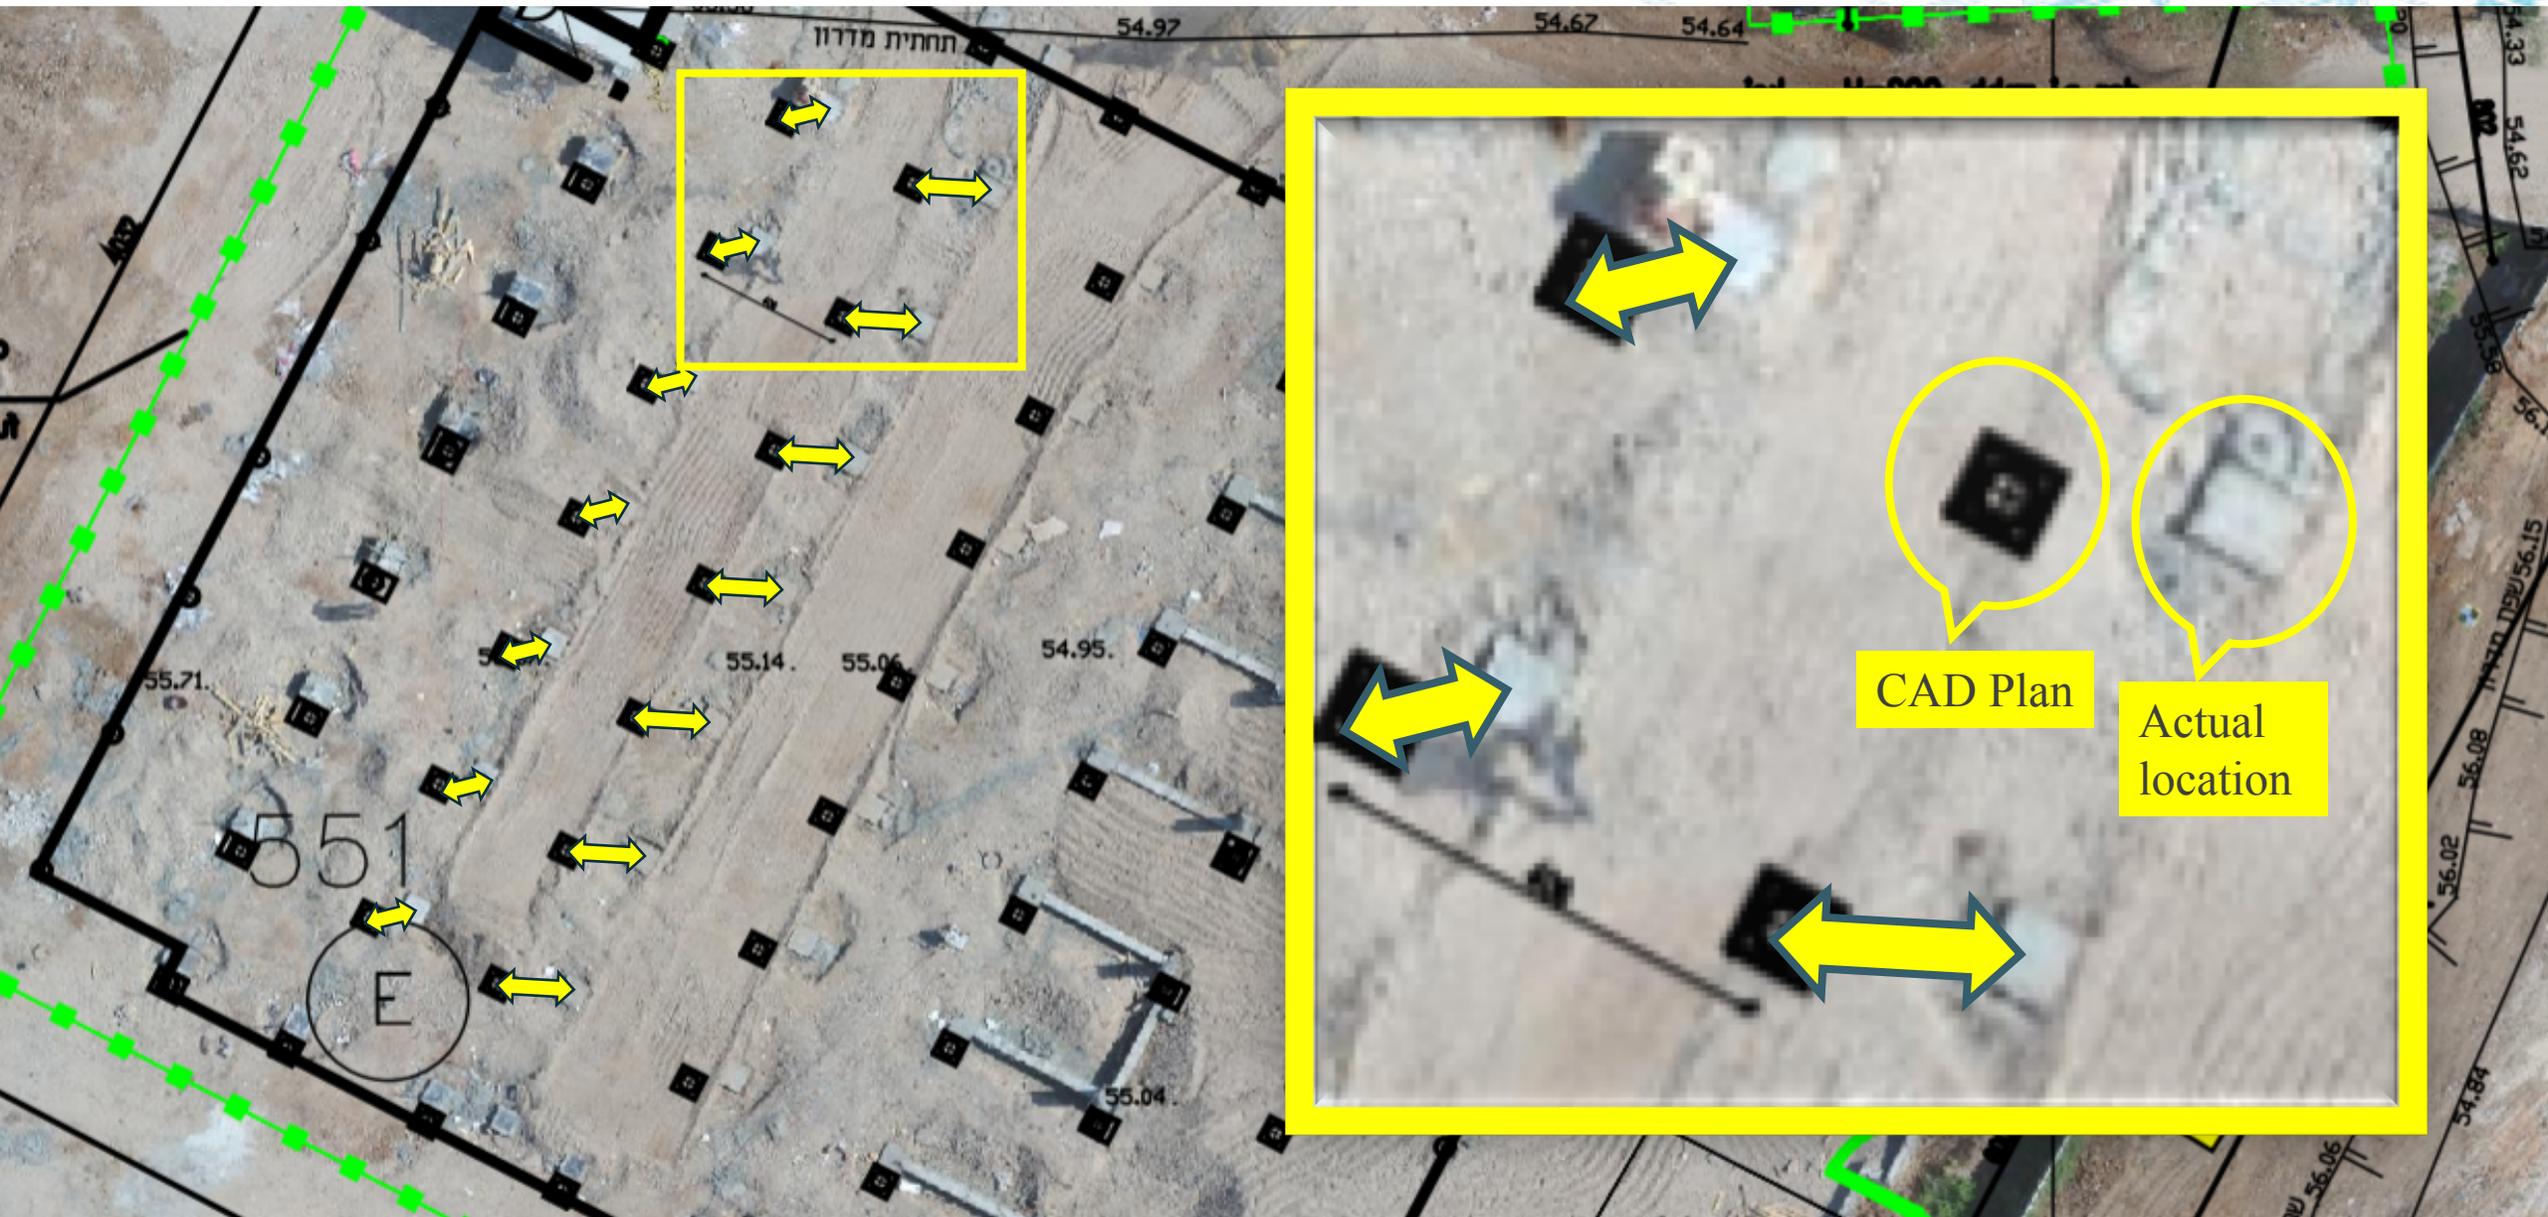

- The VDC team was tasked in finding a safer, cost-efficient method to inspect the cladding after installation
- Using the solution, QA/QC inspectors were able to perform this task in the office

- **Savings**

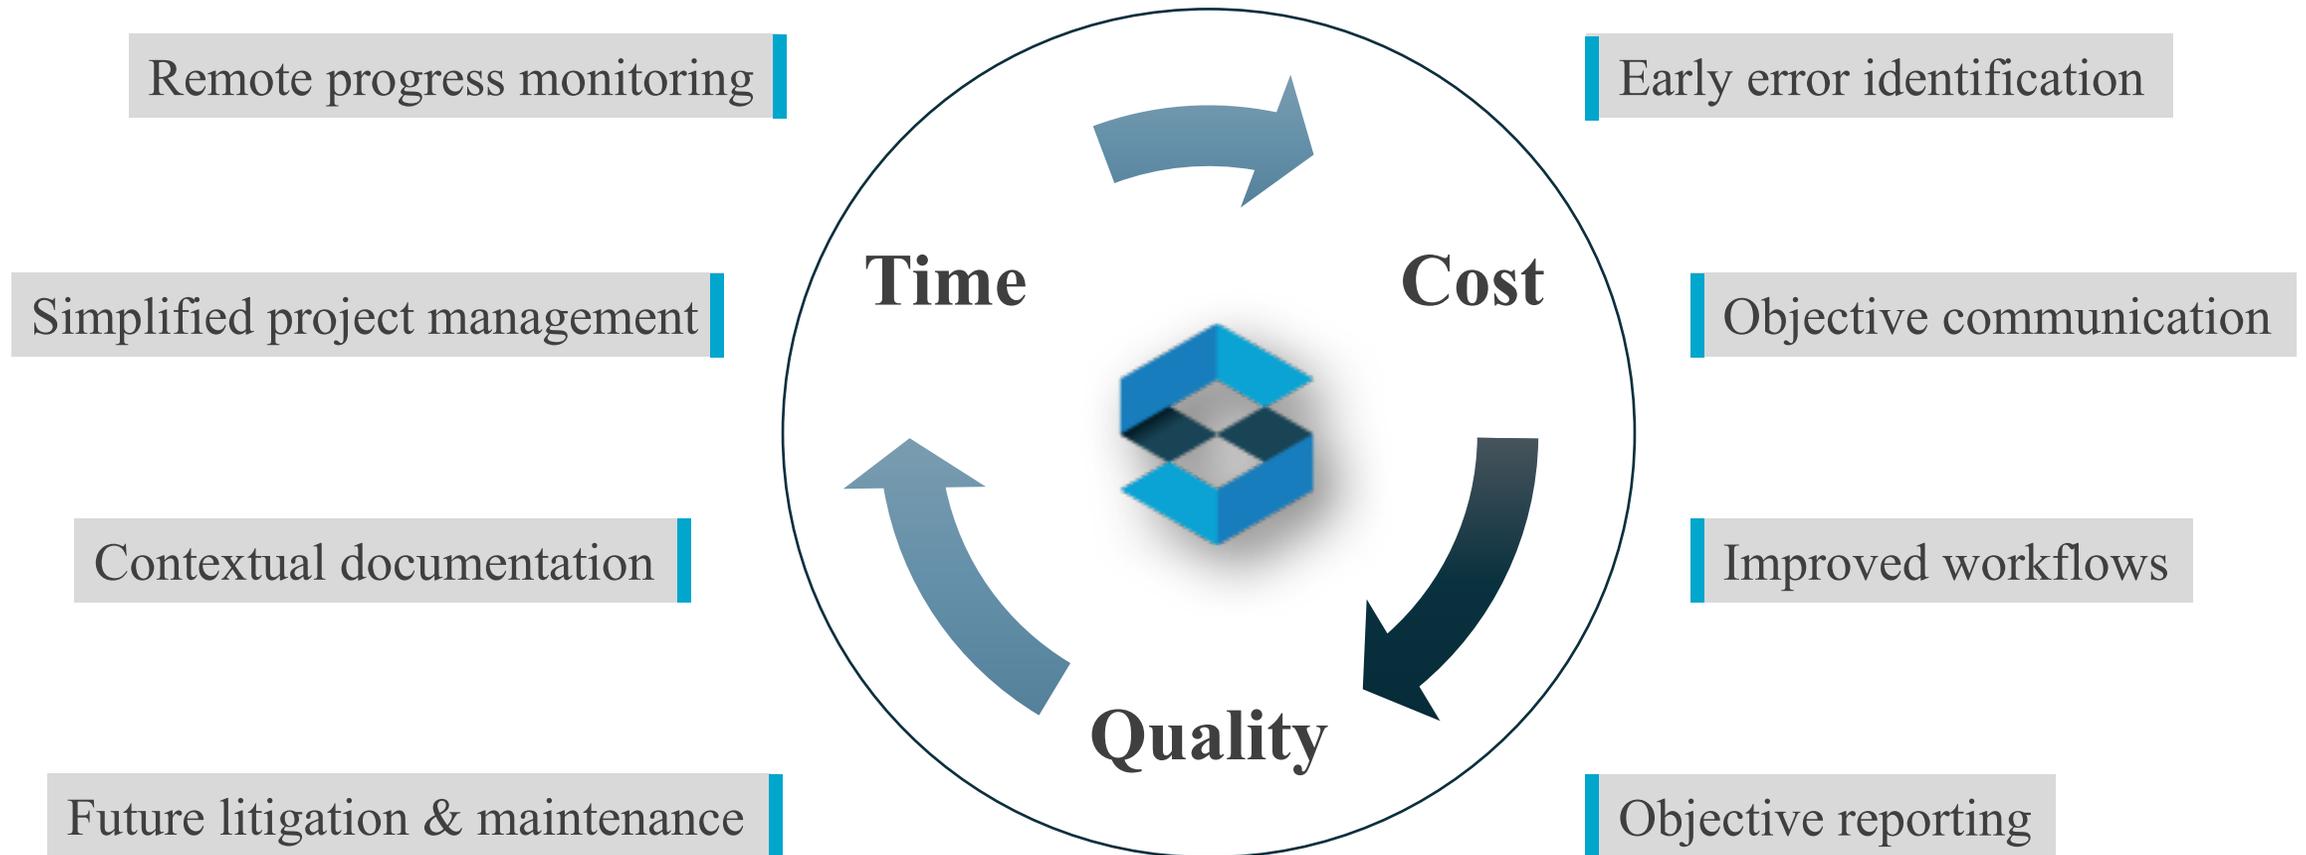

- Rental fees of elevated work platform/ suspended platform
- Excessive manhours performing the inspections outdoors

Quality Errors Detection: Overlay CAD on Orthomosaic

Digital Transformation of Construction
